

More than 8000 affected persons have already been successfully treated in the last years with the Swiss Soft Laser. The new generation of the device is now available.

# Tinnitus

## Ringling in the ears

Laser treatment, no technical knowledge necessary

The treatment of tinnitus (ringing in the ears) and similar inner ear disorders, such as partial deafness due to tinnitus, ear pressure, morbus Ménière (dizziness), acute hearing loss and hearing distortion is completely safe and painless and can be carried out at home. The laser beam even penetrates the deeper subcutaneous layers and works as curative biostimulation directly on the metabolism in the connective tissue. This leads to rapid regeneration of the hearing cells, stimulation of the immune system, acceleration of cell division and activation of specific defensive molecules. Many disorders arise through a deficiency of ATP (adenosine triphosphate), the cell energy necessary

for life. ATP deficiency leads to cell damage and destruction. However, concentrated MediLaser light (650 nm wavelength) stimulates glucose combustion to improve the ATP supply.

The EarLaser therapy can therefore accelerate the regeneration of damaged cells in the auditory system. The new EarTool concentrates the needed energy from the MediLaser precisely on the ailing area by means of an elaborate fibreglass cable. The optimised TinniTool® EarLaser sets new standards regarding product quality and ease of handling. The EarLaser fits perfectly on the head and is very comfortable. Due to the perfect positioning of the EarTool the laser beam can reach the inner ear more exactly. The new fibreglass optical fibre moves more energy into the ear. The resulting increase in power (performance) improves the efficiency of treatment and results in an optimal effect.

The laser treatment underwent successful long-term testing in hospitals and physician practices. It was submitted for extensive medical tests and was proven scientifically by various medical studies. The safety and effect of the EarLaser is attested and certified medically.

**TinniTool® EarLaser:** EUR 320.-
